# WHAT IS PROMAT?

---

On April 8-11, manufacturing industry leaders, consumers and innovators will converge in Chicago's McCormick Place to showcase the latest manufacturing distribution and supply chain equipment and systems. This is a great opportunity to discover the newest innovations the industry has to offer, meet leading providers face-to-face and see hands-on demonstrations of the latest technologies and innovations. There will be 1,000 exhibits, 4 keynotes and 100+ show floor seminars as well as 45,000 visitors all in the 420,000 squarefeet of space in Chicago's McCormick Place. Register here: <https://www.promatshow.com/register.aspx?ref=attendees>.

## PHILADELPHIA SCIENTIFIC AT PROMAT

---

Philadelphia Scientific are a manufacturer of products that improve the life and performance of industrial lead-acid batteries, with offices based in England, America and Australia.

Our range of products include battery maintenance, battery management, and battery handling products, which make battery room activities cost-effective, efficient and time-saving.

The past year has been exciting for us after winning the innovation award for our Smart Blinky Tray Monitor at the 2018 FLTA awards. We have also been working on new products this year, which include the Stealth Barbed Watering System and the Operations Display 2.0. At ProMat 2019, we will be showcasing these products, as well as a range of other products, so visitors can learn how to have a lean battery room.

The Stealth Barbed is a float-based watering system that fills all battery cells to the same level simultaneously. Its designed to sit lower than the intercell connectors which means there is reduced damage from the battery's cables. With the Stealth Barbed, battery watering is more precise and easier, making it the better choice over manual watering.

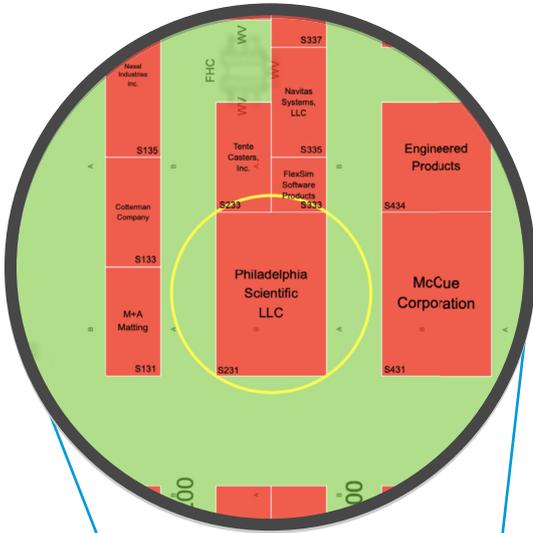

The Operations Display 2.0 is a touch screen computer that gives you a real-time view of your battery room. This can help improve insight into your battery room by giving you instant visibility, helping managers act immediately.
